

A-FIB FEELS LIKE...

... **FISH**
FLOPPING
IN MY CHEST.

AND IT INCREASES STROKE RISK BY 500%

Over 2.5 million adults experience the same flopping, pounding or rumbling, but many do not know they could have atrial fibrillation (A-Fib). A-Fib occurs when the electrical pulse in the heart's upper chambers causes rapid and irregular heart beats. As a result, life's everyday tasks can feel exhausting. This serious but treatable condition can increase your risk of stroke, hospitalization and heart disease. Make an appointment today to discuss your symptoms and treatment options with a doctor. **Learn more at MyAfib.org.**
